

## SpeakEZ Communications Capabilities

SpeakEZ Communications LLC is a full-service systems integrator that serves First Responders In-building Radio Coverage needs. From emergency radio coverage to cellular coverage solutions (DAS), it has been our pleasure to be the “go to” partner for code compliant testing, certification, design and system installation services.

### Services include:

- Structured Cabling installation ○ Cellular Site Surveys
- Cellular Signal Booster Installation ○ Public Safety Radio Coverage (ERRC) Testing
- Public Safety Radio Coverage System (ERRCS) Installation ○ Public Safety Radio Coverage System (ERRCS) Annual Certification

With a focus on First Responder radio and cellular system engineering service, SpeakEZ Communications has milestone and service-based approaches to a complete assortment of activities. Our expertise includes testing, code compliant certification, system optimization, integration scripting and implementation, radio frequency design, and installation services. Each of our engineers and installation technicians are well educated and factory trained to ensure quality, reliable service delivery.

Our DAS experts work with users to develop a customized solution based on the site’s conditions and building management requirements. We will stay involved and communicate with our contacts throughout the permitting, construction and installation of your system.

Here is a complete list of the indoor wireless turn-key services SpeakEZ Communications offers...

- Project scope – we create scopes of work and project specifications for each project
- Client representation – we serve as your representative and interact with other trades
- Pre-installation benchmark testing – we test a building with industry calibrated equipment to gain an understanding of the signal strength, targeting only areas needing enhancement to keep costs to a minimum
- System design – we use tools such as AutoCAD® and iBwave® to generate code compliant and customer needs-based predictive coverage mapping
- Equipment procurement – all equipment is prepared and tested by our procurement center
- Equipment installation – we have manufacturer trained, certified installation and commissioning technicians
- Post-installation data collection and processing – we perform system validation to ensure the public safety DAS is code compliant and will guarantee your certificate of occupancy. For cellular DAS, the post-install walk to ensure the solution meets or exceeds the design requirements and your expectations
